One of the world's most versatile 'power strippers'

With a removable weight system, this machine has the horsepower, torque and speed for heavy-duty applications such as floor cutback, scrubbing and stripping.

Three quick-release Tynex abrasive brushes, rotating between 350 and 700 rpm, easily strip a 51cm width.

Non-splash, right-up-to-the-wall scrubbing

A floating skirt enables operation right to the wall edge without splashing.

Fast start power

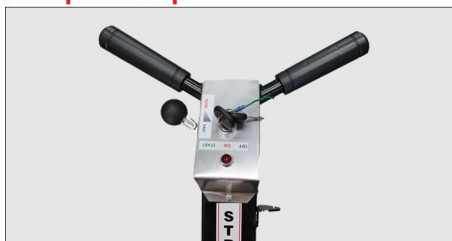

A 12 volt push-button start, fires the 13hp (9.69 kw), 4 stroke overhead valve Honda engine into action while the brushes are on the floor.

Over 120 Distributors in Australia, New Zealand and worldwide

Every Polivac product is backed by a national and international network, so you can be confident of service, repairs or parts supply being turned around ...fast!

Fast power-up

Brushes are activated by the easy-action clutch lever.

Additional weights for additional functions

Weight over the brushes is easily changed by the addition or removal of 49 kg weights to suit all floor conditions.

Pulleys protected with splash guard

Pulleys and belts are protected from contamination by the full underneath splash guard.

Easy-to-use, easier to service

Easy access to the belt and drive system means easy maintenance and serviceability, eliminating costly and unnecessary down-time.

Heavy-duty, robust steel construction, bias control, adjustable fold-down handle ...the ST2100 is a highly versatile machine that will stand up to the rigorous demands of today's floor maintenance programs.

Why Use Propane?

The main advantage of propane power lies in horsepower and torque. Combined with higher brush speeds, this translates into significant labour savings and increased productivity compared to electric or battery-powered burnishers.

Industry experts estimate the cost of labour to produce a cleaner floor using a gas burnisher has been reduced by as much as 60 percent over traditional swing buffing cleaning methods.

Alongside the development of gas burnishers, has been the introduction and continuing development of new chemical processes and combinations. These give floors a high gloss and glassy 'wet look' or mirror finish - the accepted benchmark in the cleaning industry.
